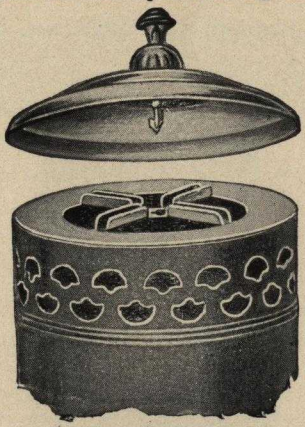
SILVER & CO.'S
OIL HEATING STOVES

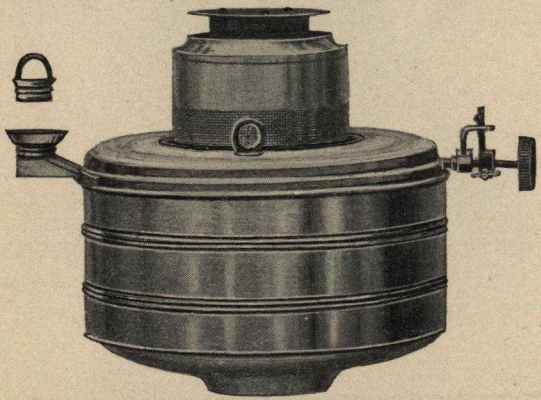
Are made as perfect as a Parlor Lamp and will warm rooms 20 feet square during cold weather

SMOKELESS

The inventors of Silver & Co.'s Oil Heaters have familiarized themselves with probably every known smokeless device for lamps and oil heaters



After experimenting and actual use of the attachments they have adapted the one now in use on their oil heaters as being the SIMPLEST, SAFEST and BEST.



Every stove has a GRATE beneath the cover and on top of drum for cooking or heating water, etc. ALL stoves illustrated take same size (9 inch) wick and will burn ten (10) hours without refilling tank.

SMOKELESS AND ODORLESS
CLEANLY—ECONOMICAL

No. 35 is the highest grade High Art Parlor Oil Heater ever invented.

No. 35 Brooklyn is mounted in a cast iron protecting frame with radiator top and with a grate on top of drum for cooking, etc. The cast iron parts are finished in black and gold (antique style).

They will warm your room. They will cook your meals. They provide a cozy and convenient stand or table for serving a breakfast or lunch.

They are very serviceable and convenient for "roomers" who wish to prepare and serve a meal in their living apartments.

The flame spreader, tubes, etc., are made of brass.

This Stove has our improved wick stop, the simplest and best made.

Diameter of Heating Drum, 8 inches. Height from floor to top of Table, 24 inches. Capacity of Reservoir, 4 quarts. Size of Wick (circumference), 9 inches. Will burn with one filling 9 hours. Weight, 25 pounds.

Price, $8.00 Each.

SMOKELESS AND ODORLESS
CLEANLY—ECONOMICAL

This Stove has our improved wick stop, the simplest and best made.

"Brooklyn" Oil Heating Stove No. 21.

The Stoves have four windows, so that the flame can be seen from all sides.

The Tank can be filled while Stove is burning without removing the Drum.

The Stove radiates the most heat because the flame is adjusted to heat the Drum.

The flame spreader, tubes, etc., are made of brass.

The Tank holds five quarts.

The wrought iron frame is provided with a turn-down (cold) handle.

The frame is handsomely finished in ebony black.

All the light metal parts shown in illustration are nickel-plated and highly polished.

It has the simplest and best wicking device ever invented.

It is constructed with the same skill and nicety as a parlor lamp.

Thousands are in use all over the world, and they give the greatest satisfaction.

When the cover top is removed it exposes a grate for heating water and for cooking.

For shipping each Stove is packed one each in a wooden crate and carefully wrapped in soft tissue paper and covered with oiled paper so that they can be exported to any country.

The Wicks are 9 inches in circumference and give a solid yellow flame of 32 square inches.

The Stoves are light and portable and can be carried about with absolute safety for warming different rooms.

There are no cast iron parts to break.

They present a handsome appearance.

They offer the greatest possible value for least money.

They are safer than a parlor lamp and require less care.

They are made by people who BEST know "HOW."

The "Brooklyn" No. 21 has FOUR LARGE MICA WINDOWS, so that the flame can be seen from all sides. It has a door for lighting and every late improvement. Diameter of Heating Drum, 8 inches. Height from floor to top of Bail, 28 inches. Capacity of Reservoir, 5 quarts. Size of Wick (circumference), 9 inches. Will burn with one filling 10 hours. Weight, 10 pounds.

EACH STOVE IS CAREFULLY WRAPPED AND PACKED IN A CRATE.

The top cover is removable, exposing a grate top, which may be used for heating water. See description of Drum on page 2.

The flame spreader, tubes, etc., are made of brass.

The tank can be filled while stove is burning, having outside funnel shaped oil filler.

This Stove has our improved wick stop, the simplest and best made.

The Tank holds 5 quarts and is very strongly made, insuring durability.

The wicktubes and all wearing parts are made of brass; all the white metal portions shown in illustration are ALUMINUM PLATE POLISHED. The wick can be lighted through the door and WITHOUT removing the drum. Height from floor to top of bail 27 ins. Diameter of drum 8 ins. Capacity of reservoir, 5 quarts. Weight 11 lbs. Size of wick (circumference) 9 ins. Will burn 10 hours with one filling.

The stove has our perforated wicking device—the simplest and best. Can be rewicked in a minute without trouble.

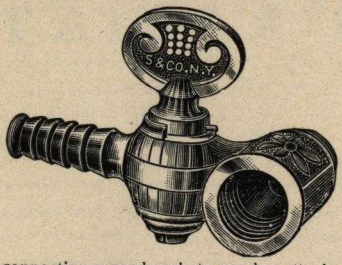
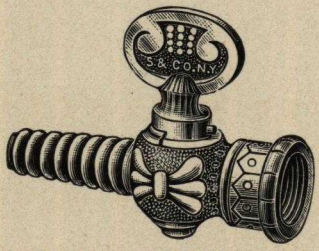
S. & Co.'s Independent Gas Connections and Covered Gas Tubing.



By using this connection a gas bracket may be attached and used at the same time a stove is in operation.

3-8 inch double, 50 cents each.

We always advise placing a stop cock between the gas supply pipe and the stove. These cocks have a clean, round bore, which gives a free supply of gas



3-8 inch single, 30 cents each.

Where a gas bracket is not desired, this is the connection to be used These connections are made of yellow brass. They have a clear, round bore, insuring a good supply.

Mohair Covered Tubing, with Tan Ends

Tan Ends, 1-2 inch bore, 12 cents.

Tan Ends, 3-8 inch bore, 8 cents.

This tubing is made of four parts. Inside a spiral spring wire, next a paraffine wicking, then a rubber coating and outside the mohair covering. It is very flexible and is recommended as the only satisfactory connection for gas stoves.

Furnished in lengths of 2, 3, 4, 5, 6, 8, 10 and 12 feet. 3-8 inch bore always furnished unless otherwise ordered.

Gas Heaters and Radiators

ADVANTAGES.

"Brooklyn" Perforated Gas Stoves and Gas Radiators are the Best.

They create the most vigorous circulation of warm air throughout an apartment.

They are the handsomest and easiest to sell.

They are Sold at Popular Prices.

SCIENTIFIC CONSTRUCTION.

The illustrations show the interior construction of "Brooklyn" Gas Heating Stoves and Gas Radiators.

Up and Down Draught.

How it Operates.

Discharged Near the Floor.

Economy.

The air from the room passes into the cylinder through the lower perforations and thence to the top of the stove, where the heated air is deflected downward and outward through the perforations just above those through which it entered the stove.

They give the most heat for the amount of gas consumed of any stoves on the market.

Manufactured Exclusively by

SILVER & COMPANY,

304-314 HEWES STREET, BROOKLYN, N. Y.
